Qualified Scaffolding Experts, Ready to Elevate Your Next Project

At DeBra-Kuempel, our team of scaffolding erectors are highly trained and highly qualified, ready to design, erect, and dismantle scaffolding for virtually any project. After erection is complete, we can also inspect, maintain, and modify scaffold to accommodate your unique needs and help promote continued functionality and the highest standards of safety.

Engineered for Convenience and Adaptability

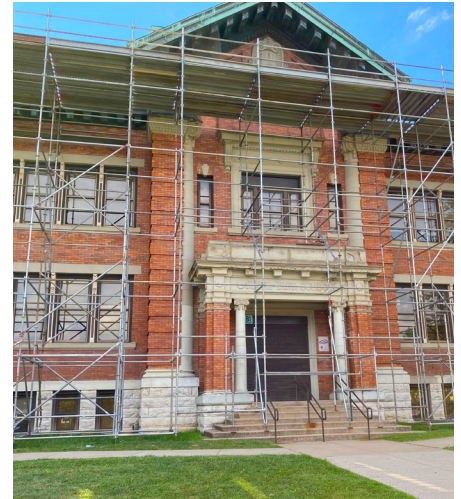

Our team utilizes the latest in system scaffolding equipment designed for integrity, versatility, and ease of use.

Featuring prefabricated, highly engineered components, our scaffold only relies on four basic building blocks for each system, promoting streamlined, highly efficient construction. And, because system scaffolding is so incredibly versatile, we can adapt to virtually any structure, inside or out, and accommodate almost every height, width, length, and angle.

Achieving the Highest Levels of Safety

Falls are among the leading cause of injury and death in the construction industry, and we take every precaution to ensure our scaffolding is constructed with the highest levels of quality, always meeting or exceeding the requirements of OSHA Standard 1926 Subpart L.

Additionally, to help ensure high quality craftsmanship, our carpenters have all taken the 40-hour scaffolding class, attended both 10- and 30-hour OSHA courses, and earned confined space certification.
